EDUCATION

University of Pennsylvania

M.S. in Computer Science, GPA: 3.85/4.00

Philadelphia, PA

Sep. 2023 – Dec. 2025

Stony Brook University

B.S. in Applied Mathematics & Statistics; Business Management, GPA: 3.65/4.00, Magna Cum Laude

Stony Brook, NY

Aug. 2018 – May 2022

EXPERIENCE

Software Engineer – Cyber Security Office

June 2026 – Present

AT&T

Middletown, NJ

- Made **100B+** rows of firewall logs searchable for the first time by building a **PySpark** pipeline on **Databricks** that splits each raw log message into **70+ typed columns**, unblocking an **\$850K** threat-detection program
- Told analysts which business unit owns the machine behind an alert by matching **12B+ network traffic records** against firewall address inventories, removing a manual step from every investigation
- Cut **6 hours a week** of raw log reading with **SQL** reports ranking top hostnames and most-triggered firewall rules
- Cut **LLM spend 30%** on a customer-facing support chatbot by building an **evaluation pipeline** that grades every conversation for answer quality and abuse risk, then feeds the worst offenders to an **Akamai** web application firewall block list
- Built the internal **React/Azure/PostgreSQL** app where analysts read flagged chats and override the model on **2%** of them
- Shortened my own feature turnaround by running **Claude Code** and **Copilot** agents against a checked-in **CLAUDE.md**, custom slash commands, and pre-commit **hooks**, with **MCP** servers connecting the agents to internal data sources

Software Engineer – Network Chief Technology Office

July 2025 – May 2026

AT&T

Middletown, NJ

- Generated **\$8M in IPv4 address sales and leasing** by writing **Python** jobs that cross-reference usage against billing records to find address blocks the company pays to hold but nobody uses
- Replaced hand-kept spreadsheets for **5 business units** with scheduled **PySpark** ETL jobs landing clean data in **Azure**
- Traced **2M+ IP allocations** to their owning team by reconciling three inventory systems that disagreed, including **ARIN**
- Gave **4 React dashboards** one number to agree on by structuring a **bronze/silver/gold Databricks** pipeline that validates raw GitHub, Excel, and CSV inputs before reporting reads them

Software Engineer Intern – Optical Network Team

June 2024 – Aug. 2024

AT&T

Middletown, NJ

- Cut documentation search time **85%** for network engineers with a **Streamlit** tool over a **Pinecone** vector store
- Reached **90% retrieval accuracy** on real engineer questions by tuning chunking and retrieval in a **GPT-4 RAG** system
- Indexed **1,000 PDF manuals** into embeddings with a **Python** pipeline, cutting manual research effort **30%**

Data Analyst

June 2022 – June 2023

Milliman

Manhattan, NY

- Cut monthly client usage report production **80%** and removed copy-paste errors by rebuilding it in **VBA**
- Let clients compare their portfolio to peer averages and percentiles with a **PySpark** ETL pipeline over **6 source databases**

PROJECTS

ROM Randomizer Web App | *React, TypeScript, Java, BullMQ, Redis, Docker*

- Kept the site responsive during randomization jobs too long for a web request by handing work from **React/Express** to a background worker over **BullMQ** and **Redis**
- Stopped the web form and the **Java** CLI from drifting apart by generating both from **one JSON schema** of **150+ settings**
- Fit web, API, worker, and Redis onto a free-tier **1GB-RAM VM** by tuning **Docker** memory limits, concurrency, and JVM heap

TECHNICAL SKILLS

Languages: Python, SQL, Java, JavaScript, Assembly, TypeScript, Go, Swift, VBA, R, C/C++, HTML/CSS

Frameworks/Libraries: PySpark, Pandas, React, Node/Express, Streamlit, Selenium, Prophet, DeepAR, SwiftUI, BullMQ, Excel

Data/Cloud/DevOps: Databricks, Azure Data Lake, Snowflake, PostgreSQL, MongoDB, Redis, SQLite, Supabase, Docker, Git

AI/ML: Claude Code, Copilot, MCP servers, agent workflows, LLM evaluation, RAG, LangChain, Hugging Face, Pinecone, Ollama
